

HOW TO HELP PREVENT CLIMATE CHANGE WITH DCI GREEN FURNITURE

WWW.DCIFURN.COM

WOOD IS RENEWABLE

Wood is a renewable resource. That's why solid hardwood furniture is the most sustainable choice. All it takes is water, soil, & sunlight to grow a tree.

REDUCE WASTE

DCI has a zero waste manufacturing policy. That means we use everything and waste nothing as we build your residence hall furniture. You get furniture with a clean conscience.

GO LOCAL

We reduce the carbon footprint of DCI furniture by: hiring local men and women; harvesting trees from New England forests within 100 miles of our sawmill; assembling it all regionally.

RECYCLE/REPURPOSE

Wood furniture is easy to recycle. We have repurposed enough old wood furniture to fill 300 53-foot containers. All of it diverted from the landfill.

DON'T POLLUTE

Unlike laminate furniture, wood decomposes naturally and nourishes the soil. Laminate furniture will sit in the landfill for 1,000 years.

POWERED BY WOOD

The factory used to build your furniture is powered with wood waste. We capture our sawdust and reuse it to fuel our boilers and generate electricity.
